

Co-operative Group - Alsager Store

ACTS were appointed to carry out the detailed design and specification for the Co-operative's flagship store in Alsager. The building was designed to achieve a BREEAM rating of Very Good.

The design incorporated the use of free heat technology to recover the waste heat from the refrigerated cases and reintroduce to the store.

To assist the Co-operative in achieving their aim of reducing greenhouse gas emissions, low global warming potential (GWP) propane chillers were installed.

The store also benefited from daylight-controlled LED ambient and display lighting throughout the 14,000ft² sales floor.

Retail

ACTS have worked with the Co-operative over the last 20 years. During this time, we have undertaken the M&E design of numerous stores and distribution centres throughout the UK.

ACTS developed a suite of M&E design briefs and technical specifications for the fit-out and new-build projects. The documents provide a framework for consistent quality and best value services installations throughout the Co-operative estate.
